

Khan Placement Agency (KPA)

Enhanced BRD & PRD v1.1

Khan Placement Agency (KPA) — Enhanced Business & Product Requirements Document

Version: v1.1 Enhanced Draft

Status: Review-ready draft

Owner: Ahamed

Date: 2026-05-15

EXECUTIVE SUMMARY

Khan Placement Agency Platform is an AI-assisted job discovery, matching, and application management platform for Indian applicants and employers. It solves a common job-search problem: applicants currently maintain profiles across multiple job boards, receive noisy alerts, and miss relevant opportunities because discovery is fragmented.

KPA creates a single applicant profile from one resume upload, continuously ingests relevant job openings from approved sources and direct employer postings, scores roles against the applicant profile, and notifies the applicant when high-quality matches appear.

STRATEGIC RATIONALE

Problem Statement:

- Fragmented job discovery
- Noisy matching
- Repeated profile creation
- Low application visibility
- Recruiter inefficiency

Vision:

"Upload your resume once. KPA watches the job market for you, explains why each role fits, and helps you apply with confidence."

BUSINESS OBJECTIVES

- 100,000 MAU applicants
- 500 paying employers
- 250,000 monthly applications influenced by KPA

- Match relevance NPS $\geq +40$
- Applicant Pro conversion $\geq 4\%$

CORE FEATURES

Applicant Features:

- Resume upload and parsing
- AI-powered job matching
- Match explanations
- Push/email/WhatsApp notifications
- Application tracking
- Saved jobs and preferences

Recruiter Features:

- Job posting
- Candidate inbox
- Match scoring
- Recruiter analytics
- Billing and invoices

Admin Features:

- Source monitoring
- Compliance tools
- Match QA
- Moderation
- Audit logs

TECH STACK

Backend:

- Python 3.12
- FastAPI
- PostgreSQL + pgvector
- Redis
- Celery

Frontend:

- Next.js
- React Native (recommended)
- TypeScript
- Tailwind CSS

Infrastructure:

- AWS ap-south-1

- EKS

- CloudFront

- S3

- RDS

- ElastiCache

SECURITY & COMPLIANCE

- DPDP Act compliance
- OAuth2 authentication
- MFA for admins
- AES-256 encryption
- Audit logging
- Consent management
- Data export and deletion flows

MVP ACCEPTANCE CRITERIA

- Applicant sees first match within 10 minutes
- Resume parsing $F1 \geq 0.90$
- Match relevance $\geq 75\%$
- p95 API latency ≤ 400 ms
- Functional consent/export/deletion flows
- Zero open P0/P1 security issues

NEXT STEPS

1. Legal review of job sources

2. Decide mobile framework
3. Finalize LLM strategy
4. Build parsing gold dataset
5. Design applicant onboarding
6. Scaffold FastAPI backend
7. Launch MVP implementation
